

Steps to run the project

1. Extract the authify.zip
2. Open the folder, you will see 2 folders, client and authify
3. Open authify in your favorite IDE (Preferrably IntelliJ IDEA)
4. Open application.properties file, change the username and password for the below properties
spring.mail.username=yourusername
spring.mail.password=yourpassword

spring.datasource.username=root
spring.datasource.password=yourpassword
5. Create database in mysql server, open mysql workbench execute the following command
CREATE DATABASE authify_app;
6. Start the application
7. Open the client application in your favorite text editor (Preferrably Visual studio code/Webstorm)
8. Open the terminal, from the root of the project, execute the following command
npm install
npm run dev
9. This will start the development server
10. Open the browser, navigate to <http://localhost:5173>
